

Bear Cat Vac

Litter Vacuum

Great on turf
and hard surfaces

Four adjustable height settings make leaves, yard debris and small branches disappear in short order.

A full 6-bushel (211.4 litre) capacity quick-dump bag, adjustable handlebars with cushion grip and ball bearing wheels for a smooth, easy glide over the ground will have you looking forward to autumn clean-up whether you're a homeowner or professional user!

The 5-blade steel fan, coupled with the wide fan housing, creates more CFM than any competitor. All models feature seamless housing and ball bearing wheels for smoother, easier rolling over the ground. An adjustable height handle bar fits the machine to the operator for even more comfort. ISO safety decal standard

Technical Specifications	
Bear Cat 75060	
Engine	Briggs & Stratton 6 HP In Tec OHV
Intake Width	68.5cm
Drive	Push
Weight	51 kg
Tyres	304 mm x 63 mm
Airflow	2300 CFM
Dimensions	L115cm x W69cm x H117cm

Where can I use the Bear Cat Vac?

The Bear Cat Vac is designed to be used for residential, commercial, or municipal pickup of leaves, grass, or other light debris.

How much reduction of debris will I get?

There is not much reduction, however, by passing through a six bladed fan into the bag some natural breakage occurs allowing the six bushel (211.4 litre) bag to be completely filled. Reduction through compaction will also happen.

Is it hard to push the Bear Cat Vac on turf?

The 12" (304 mm) rubber tyres have ball bearing hubs that allow easy movement. We also use a 2.5" (63 mm) wide tyre for added floatation.

How many height adjustments does the Bear Cat Vac have?

The Bear Cat Vac can be adjusted into four different nozzle settings ranging from .25" - 4.5" (6 mm - 114 mm) to accommodate all types of terrain.

What do I use the optional 4" (101 mm) hose kit for?

This hose kit is designed to allow vacuuming hard to reach places such as around rocks or bushes in gardens.

How difficult is it to perform maintenance on the machine?

Proper maintenance is vital. Routine maintenance, including chipper blades, will normally take only 10 minutes.
