

## **Hako-DaytimeCleaning**

*Quick-charge system for long operating times*

*For the almost permanent availability of scrubber-driers*

Always ready-to-use

## Hako-QuickchargeSystem

### Almost permanent availability

Bothered about long charging periods?

Are you looking for higher availability of your machines?

With Hako-QuickchargeSystem, your machines are almost continuously 'on duty'. In between, cleaning sessions can be carried out at any time. After a charging period of only 30 minutes, the machine is ready for use again. If you have even less time available for charging, the powerful initial charging current of up to 90 A still achieves a relatively high charging level.

### Powerful performance

- Both the quick-charge battery and the innovative quick-charge technology enable significantly increased running times even at a low battery capacity.
- The quick-charge battery keeps a high voltage level during the discharging process, enabling the system to utilize saved energy more effectively compared to conventional batteries.
- Intermediate charging is explicitly encouraged. The battery has been designed for frequent charging intervals without any considerable sacrifices to capacity
- Extremely long running times. The quick-charge system re-charges the battery during coffee breaks.
- The quick-charge, lead drive batteries are fully maintenance-free.
- The system is very environmentally friendly due to its long life cycle.

Always the right solution

## Scrubber-driers equipped with DTC

The models Scrubmaster B45 CL and B70 CL DaytimeCleaning (DTC) are modern, compact scrubber-driers for basic- and maintenance cleaning of all non-textile floors. The modular design guarantees customized machines equipped to meet client-specific requirements and operating conditions. Available are three different working widths, a tool connection point and many other interesting options. Our special battery and charging technology enables interim charging within 30 minutes, guaranteeing highest possible availability.

### Charging Technology

- The SpiralCell-Technology batteries are maintenance-free and their specific design enables high-current charging.
- The stationary, high-frequency 24 V/90A charging device switches from quick-charging to standard-charging automatically, no user-interference required. The unit can be connected to any 230 V mains socket! The plug is led through to the outside of the machine for easy reach and convenient connection to the charging device.
- Further advantages are the infinitely variable wheel drive - forward and reverse - as well as the non-marking wheels.

### Cleaning Technology

- Available are disc brush units with working widths between 43 and 65 cm.
- Electrically controlled dosing system for the entire fleet, adjustable in line with the existing level of soiling; Scrubmaster B70 CL DTC additionally equipped with speed-dependent water flow regulator.
- Innovative squeegee geometry guarantees optimal

intake of the cleaning solution, even on challenging floor surfaces.

All brushes are equipped with Hako-Aqua-Stop®. The system reduces the water consumption of up to 50%.

### Easy handling

- The machines are particularly easy to manoeuvre due to the axle drive with integrated differential.
- The integrated hand tool reaches even inaccessible areas.
- The streamlined solution tank is equipped with Anti-Foam-System (AFS) to protect the suction turbine.
- Additional equipment such as the operating-hours meter, a battery control unit with integrated charging level indicator as well as the AutoPowerOff function protect the drive batteries against damage caused by deep discharge.

### User-friendliness

- The ergonomically designed handle bar of the Scrubmaster B70 CL DTC with height-adjustable speed control enables relaxed, fatigue-free working.
- The operating panel with easy-to-read symbols and operating status display reduces learning times.
- Easy changing of brushes thanks to the Brush Release System (BRS); electronically operated at the push of a button at Scrubmaster B45 CL DTC.
- Timesaving filling with FastFill thanks to the large filling opening of the solution tank. An automatic filling system is optionally available.

**Hako: environmental-friendly right from the start**

It is our legacy to leave behind a clean planet. That is why resources-, environmental- and climate protection characterizes each and every process at Hako which has been certified by independent institutions. Learn more about our on-going commitment at [www.hako.com](http://www.hako.com).

**Everywhere and close by**

Our efficient sales & service network guarantees close proximity and rapid help - worldwide.

**Cleanliness combined with safety**

Our machines meet the highest standards. Reliable quality "Made by Hako."

**Buying, leasing, renting**

We offer you many individual and attractive financing options.

**We are available 24/7**

Hako's spare part express and on-call service guarantees best possible availability.
